

# CANCER DETECTION AND PREVENTION

Journal of the  
International Society for Preventive Oncology

issn 0361-090x

Published bimonthly by Elsevier Ltd, Oxford

## INFORMATION FOR AUTHORS

ver 2005/01/14

For the most up-to-date version of this document, please visit  
<http://www.cancerprev.org/Journal/Guidelines>  
<http://intl.elsevierhealth.com/journals/cdap>

**Cancer Detection and Prevention**, the official journal of the International Society for Preventive Oncology, is a peer-refereed publication devoted to cancer prevention by predictive and preventive oncology. A detailed description of the journal's scope and editorial policy appears on the reverse side of the front cover of each issue.

The journal publishes original papers as well as invited and review articles that contribute important current information and interdisciplinary perspectives of immediate interest to oncology investigators.

The editorial board reviews all manuscripts for possible publication with the understanding that they are being submitted only to this journal and have not been published, simultaneously submitted or already accepted for publication elsewhere. This does not preclude consideration of a manuscript that has been rejected by another journal or of a complete report that follows publication of preliminary findings elsewhere, usually in the form of an abstract. Copies of any previously published versions should be submitted with the manuscript. Failure to do so will be cause for rejection. Acceptance is contingent on author submission of complete and consistent data, accurate reference list, and conclusions in keeping with results demonstrated in the study.

The decision to publish a manuscript is solely the responsibility of the Editor-in-Chief and it is based on the reviewers' recommendations. Discrepancies and inaccuracies substantiated after acceptance may justify the return of the paper with the request for resubmission. All statements in, or omissions from, published manuscripts are the responsibility of the corresponding author, who will assist the editor and publisher by reviewing proofs before publication. Opinions expressed by the authors are not necessarily those of the publisher or the editors.

Manuscripts are subject to editing and styling that complies with the journal's standards. No published material may be reproduced or published elsewhere without the written permission of the publisher and the author. Upon acceptance of a manuscript for publication, the author will be requested to sign an agreement transferring copyright to the publisher, who reserves the full period of copyright throughout the world.

## MANUSCRIPT MANAGEMENT

**Manuscripts and any supporting documents should be transmitted electronically whenever possible.**

**New system for submission and online review of manuscripts:** The journal's online system will use the author's files submitted either on the disk that accompanies conventional submissions or as attachments to e-mail (see: *Manuscript Submission Requirements*). Editorial office staff will upload the files to the online management system and generate a PDF file for purposes of peer review. The corresponding author will be asked to approve the files before they are forwarded to the editorial board.

**Communications and timetable:** The editorial office will communicate all decisions about the manuscript to the corresponding author via e-mail. In most cases the authors will be informed of acceptance, rejection, or need for revision within 8 weeks of submission. Papers sent back to authors for revision must be returned within the time specified or the manuscript will be retired from further consideration.

**Author Gateway:** Authors may easily follow the status of their accepted papers and log-in at <http://authors.elsevier.com> using the unique reference number (**digital object identifier — doi**) assigned by Elsevier when the paper is received for publication. Page proofs for accepted manuscripts are sent via email to the corresponding author from Elsevier. Any paid color art will be included in the PDF proof. The corresponding author must return all proofs within 48 hours and limit changes to corrections of typographical errors and errors in the presentation of data. Offprint order forms will be sent with the proofs. 25 reprints will be provided to the author(s) free of charge.

## MANUSCRIPT SUBMISSION TO THE EDITOR-IN-CHIEF

**Herbert E. Nieburgs, MD**

University of Massachusetts Medical School, Dept Pathology

Box 20, 55 Lake Ave N, Worcester MA 01655, USA

TEL: 508-856-1822 FAX: 508-856-1824

E-MAIL: [editor@cancerprev.org](mailto:editor@cancerprev.org)

WEBSITE: <http://www.cancerprev.org>

## MANUSCRIPT SUBMISSION REQUIREMENTS

A covering letter, signed by the corresponding author, should accompany the manuscript files. This letter must contain the statement that the manuscript has been "**read and approved by all authors**" and should mention any additional information that may be helpful to the editors, such as publication of data related to any part of the manuscript.

Written permission from the following parties should adjoin the cover letter, as appropriate: (1) those named in acknowledgments who have been credited with substantive scientific contributions to the work; and (2) one author of each work cited in the manuscript as a personal communication, unpublished data, or a manuscript in preparation, submitted for publication, or in press.

Courier to the office of the Editor-in-Chief any **related materials that cannot be supplied electronically** (e.g., CDs with very large files or supplementary information, micrographs, etc.). If color or black-and-white photographic prints are submitted they must be glossy and provide sharp contrast. Attach an explanatory note about what the material is and the special circumstances. Provide 5 copies of this material for distribution to the editors and reviewers.

**Avoid delays in the review and publication of papers:** Providing electronic formats of illustrations, pictures, tables and other artwork helps us to reproduce your work to the best possible standards, ensuring accuracy, clarity and a high level of detail. Authors not fluent in the English language should have their manuscripts edited by an expert in the language prior to submission to the journal. In the course of selecting appropriate reviewers of a manuscript, the Editor-in-Chief may give due consideration to the inclusion of a qualified candidate nominated by the authors.

**Color art:** Color artwork supplied with your article will appear in color on the web — at no charge. Authors must enclose a letter agreeing to pay the color charge upon acceptance of their manuscript for publication. The publisher will quote the exact charge for your approval; thereafter a color agreement will be faxed or e-mailed to you in the form of a PDF.

**Manuscript Format:** Use standard 10- or 12- size font, ragged right margin and double spacing throughout (see: *Manuscript Categories; Manuscript Components*). Begin each section on a separate page. Number pages consecutively, beginning with the title page. Locate the page number in the upper right-hand corner of each page. Group the figure legends and tables after the bibliography section. A total of 10 figures and 6 tables may be submitted — numbered in the sequence cited.

### 1. Electronic submissions:

Separate files should be prepared for (1) the cover letter; (2) text of the article including legends (*do not send sections of the manuscript, such as references, in separate files*); (3) each figure or table; and (4) each of the supporting documents including permissions needed to reproduce published material or to use illustrations of identifiable subjects. Identify the software package and version used to prepare the document(s) in the email message. The article file may be in MS Word, WordPerfect, OpenOffice, EPS, LaTeX, Postscript, RTF, plain text, or HTML format, as may the covering letter. Tables also may be submitted in any of these formats. Figures should be prepared at the lowest resolution that will permit the reviewers to evaluate the work. They may be submitted in any of the preceding formats, as well as TIFF, PNG, GIF, JPG, or Powerpoint.

### 2. Conventional (hard copy) submissions:

Hard copies submissions are only necessary for manuscripts that have not been submitted electronically. A disk should be included with the first submission and each subsequent revision — accompanied by three paper (hard) copies of the manuscript and three sets of publication quality figures. The cover letter and manuscript files should be prepared in any of the formats described in the preceding section on electronic submissions and stored on a CD or a Windows- or DOS-formatted diskette. Make sure that the disk is labeled and that its contents and the hard copy match exactly. Print the manuscript on 8.5 x 11in or ISO A4 paper, on one side of the page, with margins of at least 2.5 cm (1 in). A heavy paper mailing-envelope should be used to prevent any damage to the artwork during shipping. The journal will not be responsible for damage and loss of manuscripts.

## MANUSCRIPT CATEGORIES:

- Original articles: text limited to 6000 words including all elements (25 double-spaced pages) — reporting results of original research.
- Review articles: text limited to 8000 words including all elements (35 double-spaced pages) — providing timely, in-depth treatment of an issue.
- Letters to the Editor: text limited to 500 or fewer words (reference list, footnotes, figure legend or table are excluded from the word count). Correspondence related to work published in the journal will be referred to the author(s) for comment and the response will be published along with the letter. Where the letter concerns an item appearing in the journal, cite the item in the numbered references.
- Short Communications: text limited to 1000 words (reference list, footnotes, figure legend or table are excluded from the word count).

## MANUSCRIPT STYLE

Manuscripts must be prepared according to the guidelines adopted by the International Committee of Medical Journal Editors. Please consult the updated October 2004 version of "Uniform requirements for manuscripts submitted to biomedical journals" available as a PDF file from the URL: <http://www.icjme.org><sup>1</sup>.

**Review articles — guidelines:** Visit the URL: <http://www.cancerprev.org/Journal/Guidelines/ReviewPapers> to obtain a summary of the methodology for preparing review articles — search methods and inclusion/exclusion criteria, criteria for evaluating validity (or quantity) of studies, methods for summarizing evidence, criteria for conclusions and recommendations. The synopsis is based on a 1997 editorial by D.L. Weed<sup>2</sup> that is available from the URL: <http://www.jncicancerspectrum.oupjournals.org/cgi/reprint/jnci89/1/4.pdf> - (see: 4<sup>th</sup> and 5<sup>th</sup> page of the PDF document). Also refer to the 2004 study by T.B. Patrick and coworkers<sup>3</sup> about the effectiveness of retrieval strategies for meta-analysis reviews and the validity of "evidence-based retrieval in evidence-based medicine" (available online from PubMed Central).

**References:** Citation of the literature follows the "Vancouver Style"<sup>4</sup>. Abbreviate the titles of periodical names according to Index Medicus.<sup>5</sup>

**Statistical analysis:** Statistical methods should be defined in the Methods section of the paper, and any not in common use should be either described in detail or supported by references. Refer to the editorial by Brown and Machin<sup>6</sup> summarizing the key issues in the reporting of statistical results in clinical oncology.

**Nomenclature:** In matters of spelling, capitalization, punctuation, hyphenation and general style, adhere to the standards of the American Medical Association Manual of Style.<sup>7</sup> Abide by the UICC TNM Classification of Malignant Tumors<sup>8</sup> when citing the stage of a cancer. For the classification of tumors, adhere to the standards of the World Health Organization International Histological Classification of Tumors.<sup>9</sup> Please utilize the USP Dictionary of USAN and International Drug Names<sup>10</sup> when naming drugs; state chemical nomenclature in accordance with Naming and Indexing of Chemical Substances for Chemical Abstracts<sup>11</sup>; employ SNOMED International<sup>12</sup> terminology for diseases, operations and procedures. All Human Gene Mapping designations for human genes should be capitalized and the appropriate gene symbol listed in the most recent Human Gene Mapping report.

**Units of measurements:** Report physical and chemical quantities according to standard metric usage. Use Système International (SI) base units and supplementary units (see: CBE style manual<sup>13</sup>), but do not use the SI exponential unit prefixes. Use the symbol. If exponentials are unavoidable in column headings, the quantity expressed should be preceded, not followed, by the power of 10 by which its value has been multiplied, i.e., 10<sup>-3</sup> concentration (M). A selected list of SI base units of measure and symbols appears below:

A	ampere	mol	mole
Å	Angstrom (0.1 nm)	µm (not μ)	micrometer (not micron)
cd	candela	mM	millimolar (millimoles/liter)
Ci	curie	nm (not nμ)	nanometer (not millimicron)
g	gram	pm (not μμ)	picometer (not micromicron)
K	Kelvin	R	roentgen
kg	kilogram	rad	radian
liter	<i>is not abbreviated</i>	s	second
m	meter	sr	steradian
M	molar (moles/liter)	V	volt

**Abbreviations:** Authors may use without definition the abbreviations listed at: <http://www.cancerprev.org> Avoid abbreviations in the title. The full term

for which an abbreviation stands should precede its first use in the text unless it is a standard unit of measurement.

## MANUSCRIPT COMPONENTS

### TITLE PAGE

The title page should contain the following headings:

1. **title of the article:** the title should be concise but informative; abbreviations should not be used in the title;
2. **short title:** a briefer version of the title (no more than 40 characters) that will serve as a running head in the printed version;
3. **category:** the type of article should be specified — original article, review article, short communication, Letter to the Editor, Tribute — final categorization in the Table of Contents is at the discretion of the Editor.;
4. **condensed abstract:** a two-sentence abstract, suitable for the Table of Contents, should succinctly summarize significant conclusion(s) or message that the article brings to the reader;
5. **authorship:** the first name, middle initial, and last name of each author must include the author's highest academic degree(s); the number of authors should not exceed 10;
6. **affiliation:** the name of department(s) and institutions with which each author is affiliated (the initials of each author should be shown parenthetically following the affiliation);
7. **corresponding author:** the name, complete mailing address, telephone, fax and e-mail for correspondence with the author responsible for communication and reprints;
8. **sources of support:** support in the form of grants, equipment, drugs or all of these that require acknowledgment.
9. **total number counts of each:** (1) authors; (2) text file(s) (3) table file(s); (4) figures and illustrations (files and originals); and (5) permissions accompanying the cover letter.

### ABSTRACT AND KEY WORDS

Prepare a condensed abstract (two-sentences in length) for the title page. On the following page, prepare the abstract text (250 words in length) with subheadings: *Background, Methods, Results, Conclusion(s)*. State the purposes of the study or investigation, basic procedures (study subjects or experimental animals and observational and analytic methods), main findings (give specific data and their statistical significance, if possible), principal conclusions and interpretations. Emphasize new and important aspects of the work, future directions for confirmatory study and/or applications. Use only approved abbreviations; if others are absolutely necessary, create them at the point of first use. Do not include references.

Below the abstract, provide and identify as "Author's key words" 10 terms (or phrases) not in the title that will assist indexers in cross-indexing your article. Use terms from the current medical subject headings list from The National Library of Medicine. The key words will be published with the abstract.

### The author is hereby made aware of the following procedures:

- (1) Elsevier may choose to publish the abstract (in press) before it is published in the journal. Please contact the Elsevier Production Department if you do not want to make any such prior publication for any reason including disclosure of patentable invention.
- (2) Abstracts are often copied directly by secondary services. The author's keywords may not be copied and indexed. Keywords used to describe and interpret the study should also appear in the abstract text.

### TEXT

The text of observational and experimental articles is usually divided into sections with the headings: **Introduction, Materials and Methods, Results, Discussion**. Long articles may need subheadings within some sections to clarify their content, especially the **Results** and **Discussion**. Other types of articles such as case reports, reviews, and editorials may need other formats, and authors should consult the journal's website for further guidance. Avoid the use of footnotes as much as possible. If they must be used, number them consecutively with Arabic numerals.

### INTRODUCTION

Clearly state the purpose of the article. Summarize the rationale for the study or observation. Give only strictly pertinent references, and do not review the literature extensively.

### MATERIALS AND METHODS

The Methods sections of articles are exempted from the word count. Methodology and procedures should be included that correspond to each of the end points presented in the Results. Mention limiting experimental conditions, specific outcomes assessment and methods of assessment. Where appropriate, clinical and epidemiologic studies should be analyzed

to see if there is an effect of sex on any of the major ethnic groups. If there is no effect, it should be so stated in the Results.

- Describe the methods in sufficient detail to allow qualified workers to reproduce the results.
- Identify the methods, apparatus (manufacturer's name and city in parentheses), full names as well as standard abbreviations of labeled compounds and isotopes used for labeling.
- Give references to established methods, including statistical methods; provide references and brief descriptions of methods that have been published but are not well known: thoroughly explain new or substantially modified methods, give reasons for using them and evaluate their limitations.
- Include numbers of observations and the statistical significance of the findings when appropriate; tests of statistical significance should be two sided, and outcome variables should generally be given as point estimates, with 95% confidence intervals rather than standard deviations or standard errors.
- Methods of statistical analysis should be located in a subsection detailing the statistical techniques employed, mathematical derivations and the like. In some instances this information may be suitably presented in the form of one or more appendixes, which should follow the reference section.
- **Consent and approval:** Describe clearly your selection of the subjects (observational patients or experimental animals, including controls):
  - When reporting experiments on human subjects, an explicit declaration must be made that:
    - a) the investigations were performed after approval by a local institutional review board and in accord with an assurance filed with and approved by the U.S. Department of Health and Human Services, or where appropriate, the ethical standards of the committee on human experimentation of the institution in which the experiments were done;
    - b) written informed consent was obtained from each subject or from his or her guardian. Do not use patient's names, initials, or hospital numbers.
  - When reporting experiments on animals, indicate whether the institution's guidelines or the National Research Council's Guide for the Care and Use of Laboratory Animals was followed. Identify precisely all drugs and chemicals used, including generic name(s), dosage(s), and route(s) of administration.

## RESULTS

Present your results in logical sequence in the text, tables and illustrations. Emphasize or summarize only the key observations; do not repeat in the text all the data in the tables or illustrations, or both.

## DISCUSSION

Emphasize the new and important aspects of the study and conclusions that follow from them. Do not repeat in detail data given in the **Results** section. Include in the **Discussion** the implications of the findings and their limitations and relate the observations to other relevant studies. Link the conclusions with the goals of the study, but avoid unqualified statements and conclusions not completely supported by your data. Avoid claiming priority and alluding to work that has not been completed. State new hypotheses when warranted but clearly label them as such. **Recommendations**, when appropriate, may be included.

## ACKNOWLEDGMENTS

Acknowledge only persons who have made substantive contributions to the study. Authors are responsible for obtaining written permission from everyone acknowledged by name because readers may infer their endorsement of the data and conclusions. Give credit for any grant support provided.

## REFERENCES

Authors are responsible for the accuracy and completeness of their references and for the correct text citations.

Number references consecutively in the order in which they are first mentioned in the text. Identify references in text, tables, and legends by Arabic numerals in square brackets. References cited only in tables or in legends to figures should be numbered in accordance with a sequence established by the first identification in the text of the particular table or illustration.

Try to avoid using abstracts as references: "unpublished observations" and "personal communications" may not be used as references, although references to written, not verbal, communications may be inserted (in parentheses) in the text. Include among the references manuscripts accepted but not yet published: designate the journal, followed by "in press" (in parentheses). Information from manuscripts submitted but not accepted

should be cited in the text as "unpublished observations" (in parentheses).

**References to electronic sources:** Include the type of medium (such as "computer program" or "monograph on CD-ROM"), the version used and the supplier. References to online sources should include the type of medium (such as "serial online" or "monograph online"), the date of that specific reference (if applicable), the uniform source locator (URL), and the date that the source was accessed. A source accessed online should always be referenced accordingly, even if it is also published in printed form.

**Digital object identifier (DOI):** The DOI appears on the title page of a journal article. It is assigned after the article has been accepted for publication and persists throughout the lifetime of the article. Due to its persistence, it can be used to find the article on the Internet through various Web sites and to cite the article in academic references. It is important to include the article's DOI in the citation as volume and page information is not always available for articles published online. Further information may be found at the URL: <http://www.doi.org/> Examples of DOI references are shown below.

### Examples of correct forms of references:

#### JOURNAL

##### • Standard journal article

Prasad RK, Ismail-Beigi F. Indications for haematology. *Eur Heart J* doi:10.1053/euhj.1998.1026.

#### TABLES

Prepare each table on a separate page: remember to double space. Do not submit tables as photographs. Number tables consecutively with Roman numerals and supply a brief descriptive title for each. Give each column a short or abbreviated heading.

- Place explanatory matter in footnotes, not in the title.
- Explain, in footnotes, all nonstandard abbreviations that are used in each table. For footnotes, use superscript numbers with verbal entries; superscript letters with numerical data; \* for P values

- Use rules beneath title, beneath column heads, above footnotes (or at end of table if there are no footnotes). Do not use vertical rules or totaling rules.
- Identify statistical measures of variations such as SD and SEM. Cite each table in the text in consecutive order.

If you use data from another published or unpublished source, obtain permission and acknowledge fully. The editor, on accepting a manuscript, may recommend that additional tables containing important back-up data too extensive to be published may be deposited with the National Auxiliary Publications Service or made available by the author(s). In that event, an appropriate statement will be added to the text. Submit such tables for consideration with the manuscript.

## ILLUSTRATIONS

The Author's Gateway at URL: <http://intl.elsevierhealth.com/journals/cdap> shows how to prepare your artwork for electronic submission and includes: common problems, suggestions on how to ensure the best results, and guidelines for popular software applications and details about using specific artwork software for the Windows and Macintosh platforms. Download the PDF file from URL: [http://authors.elsevier.com/pdfs/artwork\\_instructions.pdf](http://authors.elsevier.com/pdfs/artwork_instructions.pdf) For Information on the preparation of electronic artwork, please see the URL: <http://authors.elsevier.com/issn/artwork/03768716>.

Authors may have their figures appear in black & white in print and appear in color, online, at ScienceDirect (URL: <http://www.sciencedirect.com>). The Elsevier initiative, 'Colorful e-Products' is provided at no extra charge for authors who participate. Please indicate your preference for color in print or on the Web only. For color reproduction in print, you will receive information regarding the costs from Elsevier after receipt of your accepted article. Should you not opt for color in print, please submit in addition usable black and white versions of all the color illustrations.

Figures should be professionally drawn and photographed: freehand or typewritten lettering is unacceptable. Instead of original drawings, roentgenograms, and other material, send sharp, glossy black-and-white photographic prints, usually 12.5 x 17.5 cm (5 x 7 in) but not larger than 20.0 x 15.0 cm (8 x 10 in). Letters, numbers and symbols should be clear and even throughout, and of sufficient size that when reduced for publication each item will be legible. Titles and detailed explanations belong in the legends for illustrations, not the illustrations themselves.

If glossy figures are submitted three complete sets of figures should be included. Each figure should have a label pasted on its back indicating the number of the figure, the names of the authors, and the top of the figure. Do not write on the back of the figures or mount them on cardboard or scratch or mar them using paper clips. Do not bend figures. Photomicrographs must have internal scale markers. Symbols, arrows, or letters used in the photomicrographs should contrast with the background. If photographs of persons are used, either the subjects must not be identifiable or their pictures must be accompanied by written permission to use the photograph.

Permission: If a figure has been published, acknowledge the original source and submit written permission from the copyright holder to reproduce the material. Permission is required, regardless of authorship or publisher, except for documents in the public domain.

**Legends for illustrations:** Type legends for illustrations double-spaced, starting on a separate page, with Arabic numerals corresponding to the illustrations. When symbols, arrows, numbers, or letters are used to identify parts of the illustrations, explain and identify each one clearly in the legend. Explain internal scale and identify method of staining in photomicrographs.

## AUTHOR'S CHECKLIST

*Before sending your paper to the Editor,  
please make sure that you have assembled all the files and data*

- **Title page** includes **total number counts of each**:
    - (1) authors;
    - (2) text file (including references and figure legends)
    - (3) table files — max: 6 tables
    - (4) figures/illustrations files (digital and/or glossy) max: 10 figs
    - (5) permission statements (files and copies)
  - **Abstracts**: (1) one paragraph – 250 words (2) two-sentence version
  - **Keywords**: 10 index terms
  - **References**: enumeration in text and bibliography is accurate and correctly formatted
  - **Cover letter** and statement detailing any potential conflict of interest, and source of funding
  - **Permissions**: Enclose statements for: (1) use of copyrighted material from other sources permissions (including the Web) and (2) confirming that informed consent was obtained from patients
- Electronic submission:**
- **Text files** in a standard word-processing format (preferably Microsoft Word or LaTeX, PostScript or PDF)
  - **Graphics** are high-resolution formats: either TIFF or EPS
- Conventional submission:**
- If submitting hard copy and disk, please ensure that the disk version and the hardcopy of the manuscript are identical
  - Disk is enclosed and labeled with article details (first author, first words of title), file name(s), media format (e.g., PC, Mac) file format (e.g., Word, LaTeX)
  - Original artwork is enclosed (triplicate copies of high-quality prints)
  - Color figures clearly marked as being intended for color reproduction or to be reproduced in black-and-white

## AUTHORSHIP AND DISCLOSURE FORM

*(transmitted when the manuscript is accepted for publication)*

### **Authorship responsibility, financial disclosure, copyright transfer**

Each author should have participated sufficiently in the work to take public responsibility for the content.

Authorship credit should be based only on substantial contributions to:

- (a) conception and design, or analysis and interpretation of data;
- (b) drafting the article or revising it critically for important intellectual content;
- (c) final approval of the version to be published.

### **Conditions (a), (b), and (c) must all be met.**

Each author must read and sign the statements on the form. The corresponding author must sign the acknowledgment statement.

*The form may be downloaded from URL: <http://www.cancerprev.org>*
